SUMMARY

Environmental compliance professional with two years of hands-on regulatory program ownership at two manufacturing facilities under Koch Industries. Manages Title V air, SPCC, SWPPP, RCRA hazardous waste, stormwater, and water quality programs — with no major violations. Also builds data tools: a Power BI compliance dashboard used by 600+ employees, Python automation that eliminated roughly 80% of manual reporting work, and AI agents for regulatory research. Self-taught across Python, Power BI, GIS, and Power Automate. B.S. Environmental Science, NC State, minor in Economics.

CERTIFICATIONS

- Method 9 Visible Emissions Evaluator — certified biannually
- NCMA Water Quality Sampling Certification

CORE SKILLS

Environmental Compliance: Title V Air (PCWP-MACT, BMACT), SPCC, SWPPP / NPDES Stormwater, RCRA Hazardous Waste, Water Quality Monitoring, Method 9 Opacity Evaluation, CWA / CAA, NCDEQ Coordination

Data and Automation: Power BI, Python, R, SQL, Power Automate, AI Agent Deployment, GitHub Copilot, GIS / ArcGIS / QGIS

Communication: Technical Report Writing, Regulatory Submissions, 200+ Employee Training, Management Briefings, Cross-functional Coordination

PROFESSIONAL EXPERIENCE

Environmental Coordinator | Georgia-Pacific (Koch Industries)

Dudley, NC | June 2024 – Present

- Owns five active regulatory programs across two plywood and lumber facilities — Title V air, SPCC, SWPPP, RCRA hazardous waste, and stormwater — with no major violations under any of them
- Prepares and submits Title V annual compliance certifications including PCWP-MACT and BMACT reports; coordinates permit deviations, stack test scheduling, and NCDEQ correspondence
- Certified Method 9 visible emissions evaluator — conducts biannual opacity evaluations on all regulated combustion sources at both facilities
- Runs monthly water quality sampling under NCMA certification, maintains SWPPP documentation, manages stormwater BMP inspections, and tracks corrective actions through to closure
- Built a Power BI compliance analytics dashboard from scratch — used across two facilities by 600+ employees to track KPIs, inspection status, corrective actions, and program data in real time
- Automated roughly 80% of manual department reporting using Python and Power Automate, saving the team an estimated 30% of monthly working hours across compliance workflows
- Deployed AI agents for regulatory research using Python and GitHub Copilot — cuts permit condition lookup time from hours to minutes and runs in a live production environment
- Led the rollout of the company's in-house inspection application — assisted with development and testing, produced training materials, and trained 100+ environmental managers nationally
- Runs weekly environmental compliance orientation for new plant hires covering permit requirements, site-specific procedures, and day-to-day compliance expectations
- Active in site cost reduction program — identifies ways to minimize environmental program costs through waste reduction, process changes, and vendor management
- Works directly with plant management on facility operations, giving early exposure to how a large industrial site is run across safety, maintenance, and production departments

Mobile Engineering Intern | Qorvo

Greensboro, NC | May 2022 – August 2022

- Worked in the RF characterization lab running hardware tests on mobile chips — operated handlers, set up test routines, and logged results for the engineering team
- Learned Spotfire and built data visualization dashboards to help engineers track chip performance across test batches and flag outliers
- Gained direct exposure to RF chip design, the cellular network stack, and device validation processes from early testing through production sign-off

Mobile Engineering Intern | Qorvo

Greensboro, NC | May 2021 – August 2021

- Taught myself C# in the first few weeks of the internship and built an internal data parsing application — took Excel files from multiple engineers, cleaned and reformatted them, and prepared them for a downstream code generator used in chip characterization
- The tool went into regular production use and eliminated a manual, error-prone file prep step that the team had been doing by hand
- Scoped, built, tested, and shipped the project independently — no prior C# experience, minimal guidance, first real software deliverable
- Also worked in the RF testing lab: learned how handlers operate, how test fixtures are configured, and what the chip validation lifecycle looks like from design to final sign-off

Co-Founder and CEO | Fertivo

Cary, NC | September 2017 – April 2018

- Co-founded a startup building a trash can that converted organic waste into fertilizer — developed the concept, assembled the founding team, and drove product direction from idea through prototype
- Led weekly team meetings and kept both the hardware prototyping track and business development track moving in parallel
- Called potential competitors and industry contacts to understand the market landscape and identify where Fertivo could realistically compete
- Planned multiple revenue streams: direct consumer sales, commercial facility partnerships, and municipal solid waste contracts
- Worked through several prototyping iterations troubleshooting mechanical and chemical issues as they came up during testing

EDUCATION

B.S. Environmental Science | North Carolina State University

Raleigh, NC | August 2024

- Minor in Economics
- Relevant coursework: Soil Science, Natural Resource Management, Sustainability and Climate Change, Energy and Environment, Organic Chemistry, Capstone (NRM Planning and Land Use Analysis)
- Additional coursework: Electrical Engineering — Circuits, Computer Logic, C Programming
